

RSA-16204 Series Digital Thermostat Manual

RSA-1620 series thermostats are used to control room temperature in industrial, commercial and residential environment via controlling electric modulating valve with 0-10VDC (4-20mA) control signal or floating control as well as damper actuator of VAV system.

Electronic control technology is adopted, with green backlit LCD display of: working mode (cooling “”, heating “”, ventilating “”, auto “”); fan speed (low “”, med “”, high “”, auto “”); room temperature; setting temperature etc. push button: On/Off “”; mode changeover “”; fan speed choose “” and temperature adjustment “” and “”.

Shell: PC + ABS retardant material.

Function :

- Detect and Display room temperature
- Room temperature setting
- Fahrenheit or Celsius degree display
- Timing sleep
- Control On/Off of cooling and heating equipment
- Selectable single speed or three speed fan control

Fan: thermostat with fan functions, can be selected with single speed fan or three speed fan by setting parameter.

Remote Control: input signal can be selected by setting parameter.

Specification :

- | | |
|---|---|
| □ Set temperature range: 0 - 99.5 °C adjustable | □ Power: AC 24V±10%, 50Hz/60Hz |
| □ Accuracy displayed: 0.1 °C | □ Output signal: AC 24V×2 (0.5A resistive), |
| □ Accuracy: ±0.5 °C | 0 - 10VDC(5mA) / 4 - 20mA (600Ω) |
| □ Rated Power: < 1 W | □ Input signal: dry contact (NO) |
| □ Sensor type: NTC | □ Dimensions: 86x86x23mm (WxHxD) |
| □ Display: LCD | □ Fixing screw width : 60mm (Standard) |

Operations:

- **On/Off:** Press “” buttons to turn on; press “” again to turn off.
 - **Setpoint:** With thermostat on, press “” to reduce the setpoint, press “” to increase the setpoint, the setpoint step is 0.5°C, the setpoint will be confirmed automatically after 5 seconds, and then return to display status, press “” or “” to check setpoint.
 - **Mode:** With thermostat on, press “” to change the working mode – Cooling “”, Heating “”, Vent “”, Auto “” (Auto is available from RSA-16204E to RSA-16204K).
 - **Fan Speed:** With thermostat on, press “” to select the desired speed – low speed “”, Med speed “”, High speed “”, auto “”. If single speed fan available, there's only med speed “”.
- Under auto speed fan, the fan speed will be changed automatically as below: in low speed when room temperature is 1°C difference with setpoint; in med speed when room temperature is 2°C difference with setpoint; in High speed when room temperature is 3°C difference with setpoint.
- **Sleep:** Thermostat will get into sleep function after programming. The set Temperature should to be.
 - **To set:** Press “” button for 3 seconds till “” display, there's a number of count down in the center of LCD, Use “” or “” to adjust the desired sleep time: the max. = 48 hours; thermostat will return to the working status after 5 seconds, “” is flashing to start counting down. The setpoint should be replaced by the sleep setpoint.
 - **To quit:** When thermostat get into Sleep function, “” will flash, press “” or “” to quit.
 - **Keypad lock:** press “” and “” for 10 seconds till to “” display to activate, under this function, any keypad is locked. Press “” and “” for 10 seconds till “” disappear to quit the function.
 - **Set Parameters:** With thermostat off, press “” for 10 seconds to enter menu to set the parameters.

It will confirm itself 20 seconds later after setting and return to Off state.

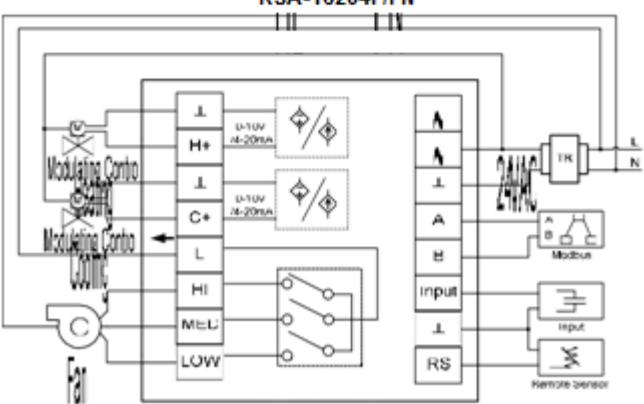

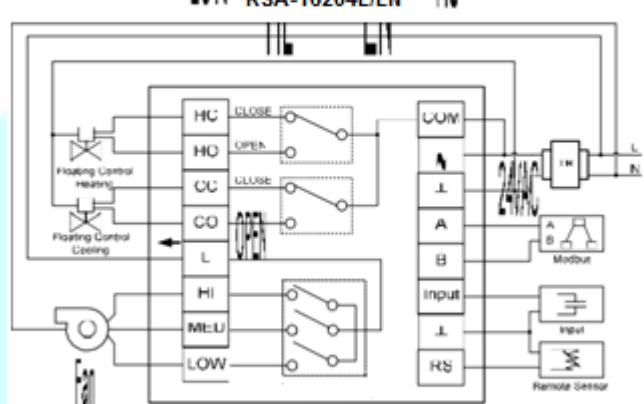

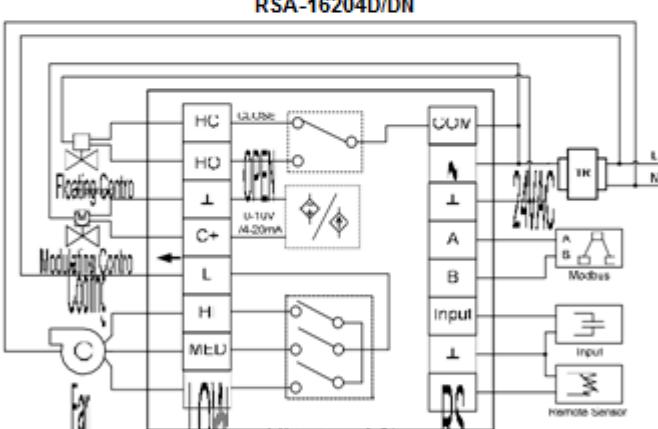

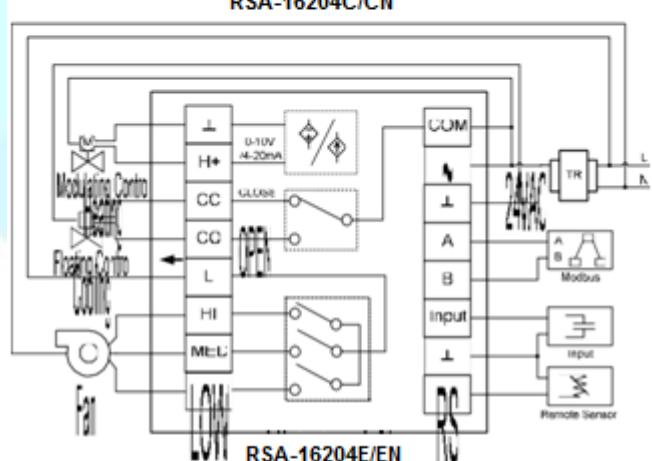

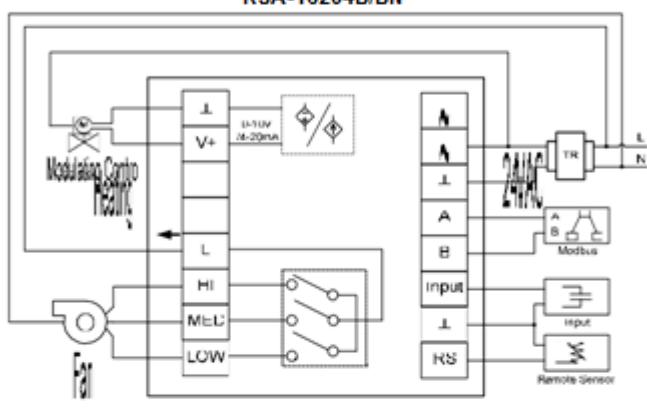

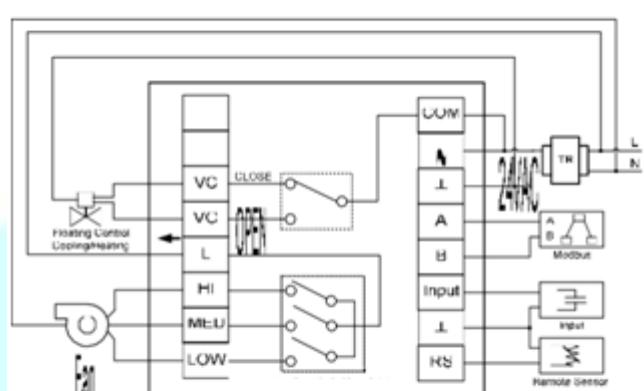

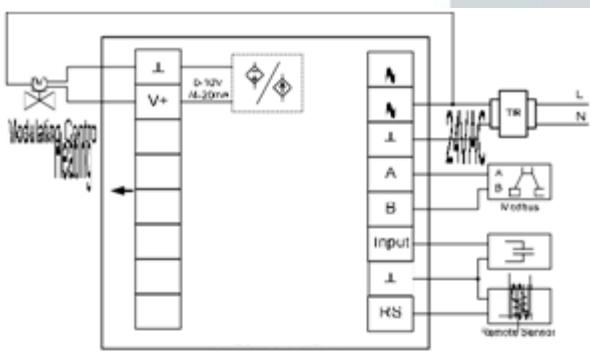

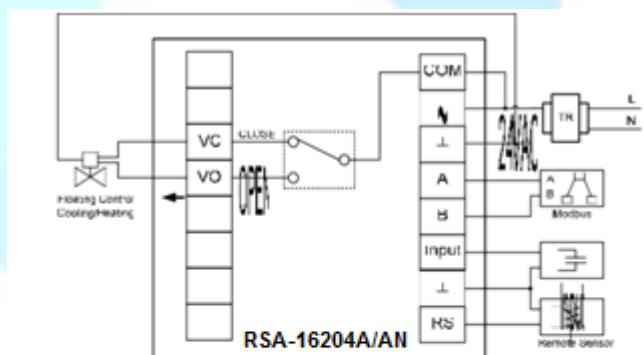

Switch: There is a 5 poles switch on PCB. The meaning is below:

Location	ON	OFF
1	120 ohm Resistance between AB wires	No Resistance between AB wires
2	Port 1 Modulation 0 - 20mA	Off
3	Port 1 Modulation 0 - 10VDC	Off
4	Port 2 Modulation 0 - 20mA	Off
5	Port 3 Modulation 0 - 10VDC	Off
